

Project Statement: Jumble Words Game

The Jumble Words Game is a simple and fun activity where the computer shows a mixed-up word, and the player has to guess the correct word.

The goal of this project is to help players improve their vocabulary and quick-thinking skills while enjoying a small word puzzle. It uses basic programming concepts like loops, random word selection, and string handling.

This project shows how even a small program can turn into an enjoyable game.

It is great for beginners who want to learn programming in a fun and easy way.
